6. Environmental Surveillance

### Labour of Care: Rural Health Workers' Wage Struggles

#### Context

- Women serving as **Anshakalin Sthiri Parishcars (ASPs)** in Maharashtra play a critical role in rural health care.
- Despite decades of service, their monthly wages have stagnated at **₹3,000 since 2016**, well below inflation-adjusted needs and minimum wage protection.

#### Key Issues

##### 1. Low and Stagnant Wages

- ₹3,000/month since 2016; only promised **₹6,000 by 2025**, still less than multipurpose health workers.

##### 2. Lack of Social Security & Benefits

- No job security, pensions, safety gear, or travel allowance.
- Delayed incentives amounting to near-subsistence.

##### 3. Gendered & Class-Based Neglect

- Majority are poor, rural women → easy to ignore.
- Reflects a **hierarchy of labour in public health**: skilled work undervalued because performed by women.

##### 4. Precarity of Work

- Classified as “volunteers” like **ASHA workers** under NRHM (2005), hence denied recognition as formal employees.
- Face occupational hazards (snake bites, road accidents during

vaccination duty) without insurance/compensation.

### Wider Context & Comparisons

- **ASHA Workers Nationwide**
  - First link to rural health system, yet treated as volunteers.
  - Long-standing demands for honoraria, social security, and recognition echo ASP struggles.
- **Structural Contradiction**
  - Government promotes women's participation in health as empowerment, but in practice → **exploitation through low wages, lack of rights, absence of dignity at work.**

### Significance

- **Public Health System**  
**Dependence:** ASPs and ASHAs form the **backbone of rural healthcare delivery** (immunization, disease surveillance, maternal-child health).
- **Undervalued Labour:** Health system is "bound to sabotage itself" unless women workers are recognized, fairly compensated, and provided secure employment.

### Way Forward

- Ensure **minimum wages** and **inflation-indexed pay**.
- Provide **social security, insurance, pensions, and travel allowance**.
- Recognize community health workers as **formal employees** rather than "volunteers."
- Build equitable labour relations in public health to ensure **sustainable healthcare delivery**.

**How to integrate this analysis into your answers:**

**Primary Relevance: GS Paper II (Governance, Social Justice, Health)**

**1. Issues relating to Development and Management of Social Sector/Services relating to Health:**

- **How to use:** This case is a critical evaluation of India's flagship National Health Mission (NHM).
  - **Implementation Gap:** The government's reliance on ASPs and ASHAs is the backbone of its rural health strategy. However, by classifying them as "volunteers" and paying them a pittance, it creates a **structural flaw** in the system. This is a perfect example of a

policy that is successful in outreach but built on the exploitation of its workforce.

- **Threat to Public Health:** The article's conclusion that the system is "bound to sabotage itself" is a powerful argument. Demotivated, financially strained health workers cannot be expected to sustainably deliver quality care, undermining the entire public health infrastructure.

## 2. Welfare Schemes for Vulnerable Sections of the population:

- **How to use:** ASPs and ASHAs are a "vulnerable section" due to their gender and socioeconomic status.
  - **Gendered Exploitation:** The article explicitly states this is a case of "**gendered and class-based neglect.**" The work, because it is done predominantly by poor, rural women, is systematically undervalued. This links women's empowerment to fair labor practices.
  - **Social Justice:** Denying them minimum wages,

job security, and social benefits like pensions is a denial of basic economic justice.

## 3. Government Policies and Interventions:

- **How to use:** The situation highlights a failure in labor policy within the health sector.
  - The use of the "volunteer" classification to avoid providing the benefits of formal employment is a key governance issue that can be critiqued.

## Secondary Relevance: GS Paper I (Society) and GS Paper IV (Ethics)

### GS Paper I: Role of Women and Women's Organization

- **How to use:** This is a stark example of the **invisible and unpaid care economy** where women's labor is essential but not formally recognized or compensated. It shows the difference between women's *participation* and their *empowerment*.

### GS Paper IV: Ethics and Human Interface

- **How to use:** The case presents a clear **ethical dilemma** and a violation of constitutional values.
  - **Ethical Dilemma:** The state's duty to provide

healthcare versus its method of exploiting a vulnerable workforce to achieve it cheaply.

- **Constitutional Morality:** The situation violates the principles of **social justice** and **dignity of labor**.
- **Probity in Governance:** A government that preaches empowerment but practices exploitation lacks **ethical governance**.

### Rise in Crimes Against Children: NCRB Report 2023

Based on the NCRB report for 2023:

- **Total Cases:** 1,77,335 cases of crime against children were registered.
- **Year-on-Year Increase:** This represents a **9.2% rise** from 2022.
- **Crime Rate:** Increased to **39.9** per 1,00,000 children from 36.6 in 2022.

### Major Crime Heads:

1. **Kidnapping & Abduction:** 79,884 cases (45% of total)
2. **Cases under POCSO Act:** 67,694 cases (38.2% of total)

### States with Highest Cases:

1. Madhya Pradesh (22,393)
2. Maharashtra (22,390)
3. Uttar Pradesh (18,852)

### More Women Join the Labour Force, But Are They Really Employed?

### Context

- **Female Labour Force Participation Rate (FLFPR)** rose from 23.3% (2017-18) to **41.7% in 2023-24**.
- Seen as progress towards **gender equality** and a **dynamic labour market**, but a deeper look reveals contradictions.

### Key Trends (Based on PLFS & NSSO Data)

#### 1. Rise in Participation

- FLFPR: 30.3% (2011-12) → 23.3% (2017-18, decline) → **41.7% (2023-24)**.
- Increase largely driven by **rural women**, not urban.

#### 2. Sectoral Composition (Chart 2)

- Majority employed in **agriculture**;
- Secondary & tertiary sector shares remain stagnant → limited structural transformation.

#### 3. Nature of Work (Chart 3)

- Sharp increase in women listed as **“helpers in household enterprises”** (91% → 96.9% between 2017-18 and 2023-24).
- Simultaneous decline in women’s participation as **regular, salaried employees** (4.5% → 4.6%) and **own account workers**.
- Much of FLFPR rise reflects **unpaid or subsistence work**, not formal/wage employment.

#### 4. Wages & Earnings (Chart 4)

- Real wages have stagnated/declined across categories, especially rural casual and self-employed women.
- Regular salaried urban women see some improvement, but majority face **low, irregular earnings**.

#### Structural Issues

- **Unpaid & Invisible Labour:** Women’s domestic roles blur into “helpers” in enterprises → not recognized as economic activity.
- **Quality of Employment:** Rising FLFPR hides the **decline in**

**decent work opportunities** and increasing vulnerability.

- **Gendered Division of Labour:** Women are pushed into low-paying, insecure roles due to lack of skills, mobility, and cultural barriers.
- **Rural-Urban Divide:** Most increase in participation is in **rural informal economy**; urban women face stagnant or falling participation.

#### Implications

1. **Statistical Illusion:** Rising FLFPR ≠ genuine empowerment; much of it reflects distress employment and unpaid family labour.
2. **Policy Gap:** Labour policies and skill initiatives have failed to translate into **quality employment** for women.
3. **Economic Costs:** Low productivity, suppressed wages, and undervaluation of women’s work weaken overall growth.
4. **Social Impact:** Continued economic dependence, reinforcing gender inequalities and vulnerability.

#### Way Forward

- **Formal Recognition:** Classify women “helpers” as workers with entitlements.

- **Skill Development & Reskilling:**  
Create sector-specific training for women, especially beyond agriculture.
- **Social Security Net:** Pensions, maternity benefits, health cover for informal workers.
- **Rural Employment Diversification:** Promote non-farm employment in secondary & tertiary sectors.
- **Address Unpaid Care Work:**  
Invest in childcare, community services to free women for formal employment.

### How to integrate it into your answers:

#### Primary Relevance: GS Paper I (Indian Society)

This is the most direct fit, dealing with the **role of women** and **social structure**.

#### 1. Role of Women and Women's Organization:

- **How to use:** The data reveals a paradox that is central to understanding women's status in Indian society.
  - **Empowerment vs. Distress-Driven Participation:** The rise in FLFPR to 41.7% is not necessarily a sign of empowerment. The fact that most of this increase is due to women working as **unpaid "helpers in household**

**enterprises"** (from 91% to 96.9%) shows that **economic necessity, not opportunity, is driving this change**. This is "distress employment," not liberation.

- **Gendered Division of Labour:** The data reinforces the traditional **gendered division of labour**. Women are confined to low-paying, insecure, and often invisible roles (like unpaid family farm work), while men dominate regular, salaried employment. This perpetuates economic dependence.

#### Primary Relevance: GS Paper III (Indian Economy)

This issue is at the core of **inclusive growth** and **human resource development**.

#### 1. Indian Economy and issues relating to Planning, Mobilization of Resources, Growth, Development and Employment:

- **How to use:** This is a classic case of a **structural problem** in the economy.
  - **Issue of "Quality" of Employment:** The UPSC often asks about the challenge of moving from informal to formal

employment. This data is perfect evidence. The rise in FLFPR is not leading to **structural transformation** (movement from agriculture to industry/services). Instead, women are getting trapped in low-productivity agriculture and informal work.

- **Economic Cost:** The underutilization of female talent and labor suppresses national income and hampers economic growth. Stagnant/declining real wages for women mean lower aggregate demand and slower poverty reduction.

## 2. Inclusive Growth and issues arising from it:

- **How to use:** The data shows that growth has not been inclusive for women.
  - The benefits of economic development have not translated into **decent work** (fair income, security, social protection) for the vast majority of women entering the workforce.

**Secondary Relevance: GS Paper II (Governance)**

The solutions are heavily dependent on government policy.

## 1. Government Policies and Interventions for Development in various sectors:

- **How to use:** The "Way Forward" section provides a concrete policy agenda.
  - You can critique existing schemes for failing to address the root causes. For example, skill development missions have not successfully moved women into the secondary and tertiary sectors.
  - The recommendations—**formal recognition of "helpers," social security, childcare infrastructure**—are specific, actionable policy suggestions that can be used in any answer on women's empowerment or employment.

## Reclaim the District as a Democratic Commons

### Context

- With **65% of India's population under 35**, the challenge is to ensure economic and democratic mainstreaming of youth.

- Public life feels fragmented amid technological, ecological, and demographic upheavals.
- Current governance is over-centralised, elite-driven, and metropolitan-focused, leaving districts underutilised.

### Key Issues

#### 1. Urban-Centric Development

- 85% of Indians live in districts of their birth, but cities (3% land) generate over **60% of GDP**.
- Corporate profits are rising, but **wages stagnate**, dampening domestic demand.

#### 2. Centralisation of Governance

- Excess reliance on **top-down administrative efficiency**: technocratic schemes, digitisation, service delivery.
- Elected representatives often act more as **convenors of welfare** than as **shapers of democratic development**.

#### 3. Youth Opportunity Deficit

- National schemes fail to engage youth meaningfully as participants, reducing

them to service recipients.

- Promises of inclusion do not translate into tangible local opportunities.

#### 4. Democratic Fatigue

- Growing gap between citizens and representatives.
- Electoral politics increasingly reduced to **welfare provision** rather than genuine empowerment.

### Proposed Framework

#### District-First Civic Transformation

- Reclaim districts as **democratic commons** – sites of political, economic, and social participation.
- Redistribute **power and accountability** at the district level.
- Foster **collective accountability, policy impact, and localised development priorities**.

#### Key Measures

- **Decentralisation**: Empower local actors, beyond bureaucratic structures.
- **Youth Engagement**: Shift from beneficiaries to active civic and economic participants.

- **Bridging Policy-Impact Gap:** Ensure schemes reflect lived realities.
- **Inclusive Participation:** Involve elites (top 10%) in meaningful democratic processes at local level.

## Significance

### 1. Economic Renewal

- Broader participation in production, consumption, and innovation.
- Reduced dependence on exports/elite consumption.

### 2. Democratic Deepening

- Moves beyond performative participation to **substantive inclusion**.
- Builds a constituency for reform linking state, civil society, and private actors.

### 3. National Resilience

- Ensures democracy serves **district youth** outside urban elite centres.
- Strengthens India's governance in an era of global volatility.

## Way Forward

- Adopt a **district-first democracy model**:
  - Empower district-level civic frameworks.
  - Reimagine districts as hubs of **shared responsibility** and **commons-based governance**.
  - Align local leadership, political accountability, and economic progress.

## How to integrate this analysis into your answers:

### Primary Relevance: GS Paper II (Governance, Constitution, Polity, Social Justice)

This is the most direct and important fit. The article's core argument is about decentralisation and democratic deepening.

### 1. Decentralization & Local Governance:

- **How to use:** The article provides a critical evaluation of the **73rd and 74th Constitutional Amendment Acts**.
  - **Critique of Current State:** While these amendments created Panchayati Raj Institutions (PRIs) and Urban Local Bodies (ULBs), the article argues that real power and

resources remain heavily centralized. Elected representatives at the district level have become mere "convenors of welfare" rather than "shapers of democratic development."

- **The "District-First"**

**Solution:** The proposal to "reclaim districts as democratic commons" is a call for genuine **devolution of the 3 F's: Funds, Functions, and Functionaries** to the district level. This is a standard answer point, but the article provides a fresh, powerful framing.

## 2. Salient Features of the Indian Constitution:

- **How to use:** The debate between a **centralized union** and a **decentralized federal structure** is a classic feature of the Indian Constitution.
  - The article's argument highlights the tension between the efficiency of top-down schemes and the democratic ideal of grassroots participation embedded in the Directive Principles of State Policy.

## 3. Role of Civil Services in a Democracy:

- **How to use:** The critique of "excess reliance on top-down administrative efficiency" and "technocratic schemes" directly relates to the role of the district administration (e.g., the District Collector) versus elected representatives.
  - It calls for a rebalancing, where the administration facilitates and empowers local democratic bodies rather than being the primary driver of development.

## Primary Relevance: GS Paper III (Indian Economy)

The article makes a strong economic argument for decentralization.

### 1. Indian Economy and issues relating to Planning, Mobilization of Resources, Growth, Development and Employment:

- **How to use:** The article links centralized, urban-centric growth to economic problems.
  - **Unbalanced Growth:** The statistic that "cities (3% land) generate over 60% of GDP" while "85% of Indians live in districts of their birth" is a powerful illustration of **regional inequality**. This leads to migration, pressure on cities, and

underdevelopment of rural areas.

- **Demand Problem:** It argues that stagnating wages and the focus on elite consumption dampen **domestic demand**. Empowering districts economically would spread wealth and create a more robust domestic market.

## 2. Inclusive Growth:

- **How to use:** The "Youth Opportunity Deficit" is a direct challenge to inclusive growth.
  - The article argues that national schemes treat youth as passive "beneficiaries" rather than active "participants." A district-first approach would create "tangible local opportunities," making growth more inclusive.

### Maharashtra, Karnataka Report Most Farmer Suicides

#### NCRB Report on Farmer Suicides, 2023)

- **Total Suicides:** 10,786 farmers & agricultural workers died by suicide in 2023 (6.3% of all suicides).
- **Breakdown:**

- Farmers: 4,690 deaths
- Agricultural labourers: 6,096 deaths

- **Gender:** Majority male; smaller share female.

- **State-wise:**

- Maharashtra (38.5%)
- Karnataka (22.5%)
- Andhra Pradesh (8.6%)
- Madhya Pradesh (7.2%)
- Tamil Nadu (5.9%)

- **Hotspots:** Vidarbha & Marathwada (cotton & soybean belts).

- **Farmer organisations' view:** Blamed government policies, import duty on cotton, WTO/free trade agreements.

- **Crisis interpretation:** "Statistical graveyard of farmers."

- **Underlying causes:** Agrarian distress, debt, crop failures, poor MSP, climate risk.

### How to use this data and analysis across the GS papers:

#### Primary Relevance: GS Paper III (Indian Economy & Agriculture)

#### 1. Issues related to Direct and Indirect Farm Subsidies and Minimum Support Prices (MSP):

- **How to use:** The data is a powerful indictment of the

limitations of current agricultural policies.

- **Critique of MSP:** The concentration of suicides in cash crop belts like Vidarbha (cotton) and Marathwada highlights the failure of the MSP system to provide a reliable safety net, especially for non-food-grain crops. Farmers are exposed to volatile global prices and trade policies (WTO, import duties), as cited by farmer organizations.
- **Debt and Credit:** The underlying cause of "debt" points to failures in institutional credit, forcing farmers to rely on informal moneylenders at exorbitant interest rates, creating an inescapable cycle.

## 2. Cropping Patterns & Different Types of Irrigation:

- **How to use:** The regional concentration in Maharashtra and Karnataka is not accidental.
  - **Water Stress and Crop Choice:** Regions like Marathwada are chronically drought-prone. The cultivation of water-intensive cash crops like cotton and

soybean in these rain-fed areas makes farmers extremely vulnerable to monsoon failures, leading to repeated crop losses and subsequent distress.

## 3. Disaster and Disaster Management:

- **How to use:** Agrarian distress, driven by climate risk and crop failure, is a **slow-onset disaster**.
  - The suicides are the most extreme outcome of this disaster. This frames the issue not just as an economic one, but as a disaster management challenge requiring proactive risk mitigation (e.g., crop insurance, drought-resistant seeds, irrigation).

### Strong Relevance: GS Paper I (Indian Society)

This issue reflects deep-seated sociological problems.

## 1. Salient Features of Indian Society & Effects of Globalization:

- **How to use:** The suicides reveal the harsh social impact of economic policies.
  - **Impact of Globalization:** Farmer organizations blaming "WTO/free trade agreements" points to how global market forces

can devastate local agrarian economies, making them vulnerable to international price shocks.

- **Agrarian Social Structure:** The distress exacerbates existing social inequalities, pushing already marginalized small and marginal farmers, as well as landless agricultural labourers (who form the majority of suicide victims), deeper into poverty and despair.

**Relevance: GS Paper II (Governance) & GS Paper IV (Ethics)**

**GS Paper II: Government Policies and Interventions**

- **How to use:** The persistent high numbers year after year, despite numerous government schemes, indicate a massive **implementation gap** and a failure of policies to address the root causes of agrarian distress.

**GS Paper IV: Ethics and Human Interface**

- **How to use:** This is a severe ethical failure of the system.
  - **Dignity and Social Justice:** The phenomenon raises questions about

the state's duty to ensure a life of dignity for its food producers. It is a stark reminder of the gap between constitutional goals (social justice) and ground reality.

- **Probity in Governance:** It challenges the integrity of governance, questioning whether policies are truly designed for the welfare of the most vulnerable.

### Environmental Surveillance

Environmental surveillance involves tracking disease-causing pathogens (bacteria and viruses) through environmental samples such as sewage. Wastewater surveillance, in particular, serves as an early warning system for potential disease outbreaks.

### How It Works

- Samples are collected from **sewage treatment plants, hospital effluents, and public spaces** like railway stations and airplane toilets.
- Infected individuals shed pathogens in their **stools or urine**, allowing detection in wastewater.
- The method also monitors diseases transmitted by **parasitic worms** (e.g., roundworms, hookworms)

through wastewater and soil samples.

- Rigorous protocols guide sample collection, processing, and analysis, enabling:
  - Comparison of pathogen load over time.
  - Identification of pathogen variants via **whole-genome sequencing**.

### Importance of Environmental Surveillance

- Traditional **clinical case detection** misses asymptomatic or mildly symptomatic cases, leading to underreporting.
- Environmental surveillance provides **early warnings**, as pathogen levels in wastewater often rise **more than a week before** a surge in infections.

### Significance of Early Warnings

- Early detection aids **public health planning** and outbreak preparedness.
- **Wastewater-based epidemiology** has been used for over **40 years** to track diseases like **measles, cholera, and polio**.
- In India, wastewater surveillance was first initiated in **Mumbai in 2001 for polio**.
- During the **COVID-19 pandemic**, surveillance programs were

launched in **five cities** and continue today.

### India's Initiatives

- The **Indian Council of Medical Research (ICMR)** plans to expand wastewater surveillance for **10 viruses across 50 cities**.
- This will help detect increases in viral load and monitor outbreaks, including **avian influenza**.
- Challenges include the need for:
  - Standardized data and protocol sharing.
  - **Programmatic approaches** integrating environmental surveillance with routine disease monitoring.
  - Development of a **national wastewater surveillance system**.
- Emerging technologies, such as **analyzing audio samples of coughs** using machine learning, are expanding the scope of environmental surveillance.

### How to integrate this into your answers:

#### Primary Relevance: GS Paper III (Science and Technology)

This is the most direct fit. The topic falls under "Awareness in the fields of IT, Space, Computers, robotics, nano-technology, bio-technology" and "Achievements of Indians in science & technology."

## 1. Developments and their Applications and Effects in Everyday Life:

- **How to use:** This is a perfect example of an **indigenous technological application** with a direct public benefit.
  - **Innovative Public Health Tool:** Frame wastewater surveillance as a "**force multiplier**" for India's public health system. It is a cost-effective way to monitor the health of an entire community from a single sample, overcoming the limitations of individual clinical testing.
  - **Link to Biotechnology:** The process of sampling, genetic sequencing, and data analysis is a direct application of **biotechnology and bioinformatics**.
  - **Data for Governance:** The use of data analytics and machine learning (as mentioned for cough audio samples) to predict outbreaks is a sophisticated use of **AI in governance**.

## 2. Disaster and Disaster Management:

- **How to use:** Pandemics are a form of biological disaster. Environmental surveillance is a critical tool for **disaster preparedness and early warning**.
    - **Early Warning System:** The key point that pathogen levels rise in wastewater "more than a week before a surge in infections" makes this a powerful tool for **proactive disaster management**. It allows authorities to ramp up testing, hospital beds, and public awareness *before* the healthcare system is overwhelmed.
- ## 3. Challenges to Internal Security:
- **How to use:** While not a direct security threat, a large-scale pandemic can destabilize a country, making it an issue of **non-traditional security**.
    - **Health Security:** Ensuring the health of the population is a core function of the state. A robust surveillance system is part of **national health security**, preventing societal and economic disruption.

**Secondary Relevance: GS Paper II  
(Governance and Social Justice)**

The implementation of such a system is a test of governance.

**1. Issues relating to Development and Management of Social Sector/Services relating to Health:**

- **How to use:** This is a direct intervention in the health sector.
  - **Evaluating Government Initiative:** The **ICMR's plan to expand surveillance to 50 cities for 10 viruses** is a concrete government initiative you can cite as a positive step. You can then discuss the associated **governance challenges:** the need for standardized protocols, inter-agency coordination, and data sharing.
  - **Preventive Healthcare:** It represents a shift from a curative to a **preventive and predictive healthcare model**, which is more efficient and sustainable.
